

# Enterprise Connect Guide

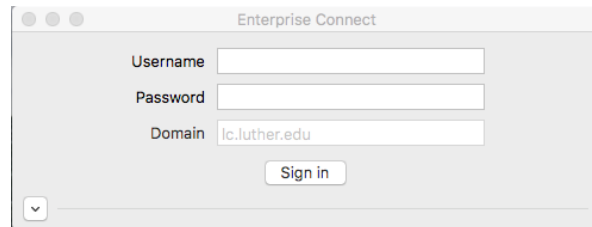

**Enterprise Connect is an application that syncs your Norse Key and workstation password.** This has been implemented to enhance security. When your Norse Key changes, you will be prompted to change your workstation password to match your new Norse Key password.

*Note - Enterprise Connect will only work on Luther's network or while connected via a VPN.*

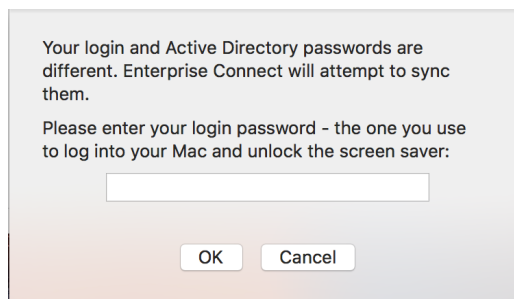

## How To Use Enterprise Connect

The first time you log into your workstation when it is new or after a password change, you will be prompted to sync your passwords.

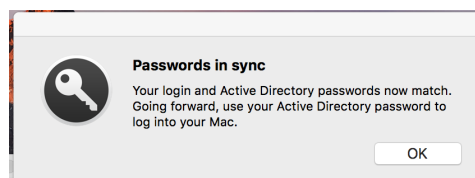

1. A box will appear asking for a username and password. Enter your **Norse Key** and click **Sign In**.

2. You will be prompted to enter the password you used to log onto your workstation. If this is a new workstation, this will be **changeme**. If this is a password change, this will be your **old password** (i.e. before you changed it at norsekey.luther.edu).

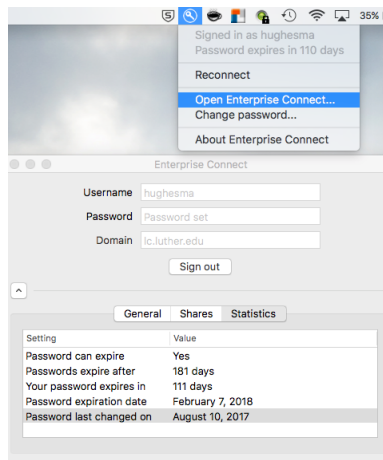

3. Your passwords will now be synced. You will now use your Norse Key to log into your workstation.

# Enterprise Connect Features

The icon for Enterprise Connect will appear in the upper right of your menu bar (near the clock and battery). The icon has two states:

-  Connected to Luther's network (either on-campus or connected through VPN)
-  Disconnected from Luther's network (off-campus, no Internet, etc)

## Open Enterprise Connect

Clicking on Open Enterprise Connect will allow you to Sign In/Sign Out. There are also three tabs:

**General:** Application settings (cannot be altered by the user)

**Shares:** Enterprise Connect can automatically connect to a network share upon login.  
(ex: *smb://adm1.lc.luther.edu/departmentname*)

**Statistics:** Shows information about your Norse Key including when it was last changed and when it will expire.

## Change Password

Clicking on the Change Password link will send you to the Norse Key webpage (*norsekey.luther.edu*).
